

This is the layout that we are currently using at RNM Wings

The pilots station is a floating dock 8ft x 16ft with a 16ft ramp/walkway to it.

The pit area is up past the sandy beach, which is approx 6 ft wide, we have work tables in this location.

Spectator area is in front of the clubhouse, which puts spectators well past 30M from the flight line

While we do not have / are not able to have a fence line separating viewers from fliers, there is a 6ft wide sandy beach area and then a rise of approx 2 feet onto the pit area from the waterline

GPS coordinates of the pilots station are as follows: 45.22340, -75.7750

The flight box spans 250M West to East and over 600M north to south

Fliers are not allowed to fly past the ½ way point W/E of the quarry so as to not interfere with Tomlinson dredging that is happening along the Eastern shore of the sand pit / quarry and to stay out of restricted airspace.

We no longer have another RC club down the road from us as ORCC has moved but we have stuck
